

URANIUM SECTOR COVERAGE

Uranium Reaction: Point of maximum pessimism

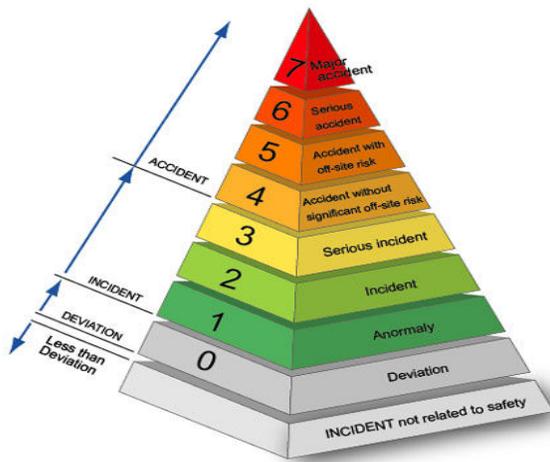

FOCUS POINTS

Outside of general market weakness, what is the worst that could reasonably happen to the global uranium market?

Nothing.

This year we have had the most powerful earthquake to ever hit Japan (9.0 on the Richter scale) and subsequent tsunami waves of up to 15m in height trigger the largest nuclear accident since the 1986 Chernobyl disaster. A disaster so great, the International Atomic Energy Agency (“IAEA”) applied the highest rating of “7” on its International Nuclear and Radiological Event Scale.

Exhibit 1. International Nuclear and Radiological Event Scale

Source: www.sciencemediacentre.co.nz

In reaction, countries around the world placed their nuclear programs under review and performed safety checks to reassess safety measures. Germany announced that it intends to exit nuclear power generation by 2020, Italy has cancelled plans on building 10 new reactors and Switzerland has abandoned plans to build new reactors and will not replace its five existing reactors at the end of their respective life spans.

However, outside of Germany, Italy and Switzerland, there does not appear to be any other countries seriously considering a negative course change with respect to nuclear power. In fact, reports have been positive. The China Nuclear Energy Association announced in mid-August that it completed a nationwide safety inspection of nuclear plants on August 5th – a month ahead of schedule. This has led to speculation that the Chinese intend to resume nuclear plant approvals, which were suspended in the wake of the Japanese disaster.

See disclosure and a description of our recommendation structure at the end of this report.

We view the current scenario as the point of maximum pessimism for nuclear and the uranium industry. Outside of global economic weakness, there does not appear to be a foreseeable negative catalyst for yellowcake. Germany, Italy and Switzerland have made their decisions while the Fukushima Da-Ichi plant is under control (with no fatalities). There is nothing to cause the next leg down.

The fundamentals for the nuclear and the uranium market remain largely unchanged. Of the 440 nuclear reactors that are currently operable, Germany’s 17 reactors account for only 3.9% and Switzerland’s 5 plants account for just 1.1%. Notably, 62 nuclear power reactors are currently under construction, which is a 14.1% increase from the current state.

As can be seen in exhibit 2, global nuclear reactor growth has continued despite the tragedy at Fukushima there are now a total of 558 reactors that are currently in the construction, planned or proposed stage as opposed to 540 at the beginning of the year.

Exhibit 2. Global Nuclear Reactors Under Construction, Planned or Proposed

Source: World Nuclear Association

SUPPLY AND DEMAND REMAIN UNBALANCED

Currently the 440 nuclear reactors in operation require approximately 179 million lbs of U₃O₈ on an annual basis. However, 2010 production was only 139.5 million lbs of U₃O₈. The 39.5 million lbs shortfall is largely being made up by the U.S.-Russian Highly Enriched Uranium agreement that downblends highly enriched uranium from Russian nuclear weapons into low enriched uranium used as nuclear fuel. However, given the high cost of this program, it is widely expected that the program will not be renewed at the end of its 2013 term.

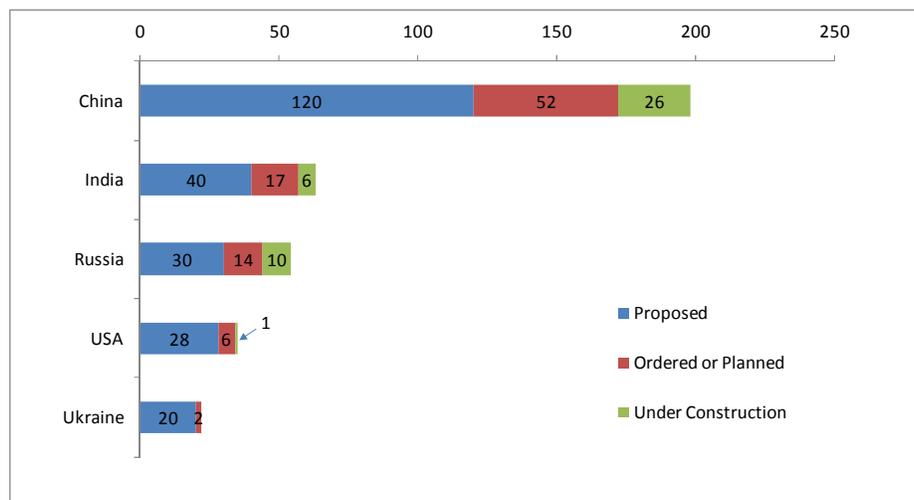

In just over two year’s time the bulk of the secondary supply will disappear while 62 new nuclear reactors will begin coming online and demand uranium

feed. New mine start-ups like Cameco’s (CCO-TSX) Cigar Lake and mine expansions like BHP Billiton’s (BHP-NYSE) Olympic Dam are planned to address the global demand for uranium. However, development delays, sub-optimal production results, labour issues or any one of a number of typical supply-side delays could create an unexpected shortage.

CHINA, INDIA AND RUSSIA LEAD THE WAY

Of the 558 nuclear reactors currently in the construction, planned or proposed stage, 372 or 67% are from China, India, Russia, USA and Ukraine.

Exhibit 3. Top 5 Countries – Nuclear Reactor Build Programs

Source: Versant Partners

China is particularly aggressive as the 26 reactors that it currently has under construction account for 42% of the 62 reactors being built around the world. The Chinese government is targeting 40 gigawatts of electric capacity by 2015 and nuclear power is a cornerstone solution.

Countries that previously did not have nuclear power as part of their energy solution are considering adding it in the future. Saudi Arabia is planning to build 16 reactors by 2030 to supply 20% of its future electricity demand.

Cameco Corp, who is vertically integrated throughout the nuclear fuel cycle and is one of the best positioned to assess nuclear power generation and uranium production has recently revised its 10-year global demand outlook downwards by only 3% to 2.1 billion pounds. The 3% reduction would translate into a 2011 revised global uranium consumption estimate of 175 million pounds versus forecast global production of 145 million pounds – a deficit of 30 million pounds. Over the next 10 years, Cameco expects the significant supply deficit to continue.

VALUES ABOUND IN THE URANIUM SPACE

With strong fundamentals supporting the case for higher uranium prices and coupled with the fact that there are no reasonable sector-specific negative catalysts on the horizon, there are several values available in the uranium space.

Being the bellwether of the sector and the producer with the largest market capitalization, Cameco Corp will be the first choice for many large institutional portfolios looking for exposure to uranium. As such, CCO has historically been the first mover in any uranium recovery. Since the Fukushima disaster, Cameco has declined 40%.

Exhibit 4. Cameco Corporation (CCO-TSX)

Source: Yahoo! Finance

The producer with the highest exposure to spot uranium prices is Uranium One (UUU-TSX). Unlike its producer peers, Uranium One is currently 100% exposed to uranium spot prices while its peers have >40% of their sales contracts locked into term agreements. This provides UUU with the opportunity to fully benefit from any increases in spot uranium prices. In addition, at a cash cost of about U\$17/lb of U₃O₈, Uranium One has the lowest cost of production in the producer category. Since the Fukushima disaster, Uranium One has declined 53%.

Exhibit 5. Uranium One (UUU-TSX)

Source: Yahoo! Finance

Investors looking for direct exposure into physical uranium and who prefer to avoid company-specific risks may be interested in Uranium Participation Corp.

(U-TSX). Substantially all of its assets are invested in either uranium oxide concentrate (U_3O_8) or in uranium hexafluoride (UF_6). Since the Fukushima disaster, Uranium Participation has declined 32%.

Exhibit 5. Uranium Participation (U-TSX)

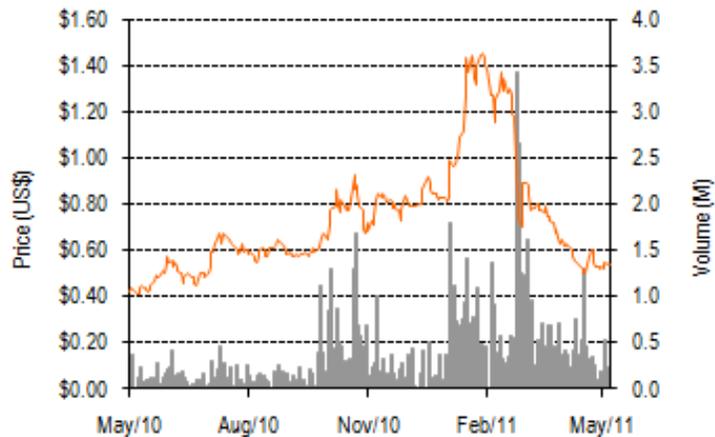

Source: Yahoo! Finance

Equities offering significant exploration upside in the uranium space include Fission Energy (FIS-V), which is located within a 110 million lbs U_3O_8 camp beside notable uranium explorer Hathor Exploration (HAT-TSX) and deposits owned by Areva Mines (CEI-Fr) and Denison Mines (DML-TSX). It is located within the Athabasca Basin, a region that has produced uranium since 1975. Since the Fukushima disaster, Fission Energy has declined 58%, while its neighbour Hathor has only declined 4%.

We have a Buy (SPECULATIVE) rating on Fission Energy.

Exhibit 6. Fission Energy (FIS-TSXV)

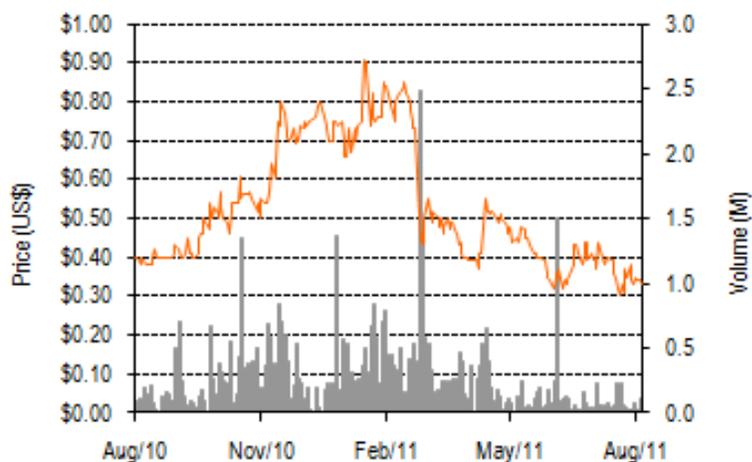

Source: Yahoo! Finance

Another uranium exploration company with significant upside potential is Kivalliq Energy (KIV-TSXV). Located in Nunavut territory, the Company's Angilak deposit is the highest grade uranium deposit located outside of the Athabasca Basin with a global U_3O_8 grade of 0.79% and 14.15 MM lbs. The company has only explored a small portion of its total land package and has significant potential to increase its resource size. Since the Fukushima disaster, Kivalliq has declined 55%.

We have a Buy (SPECULATIVE) rating on Kivalliq Energy with a target price of \$1.00.

Exhibit 7. Kivalliq Energy (KIV-TSXV)

Source: Yahoo! Finance

Energy Fuels (EFR-TSX) presents an interesting opportunity for investors looking for uranium exposure as it is a developer located in the Uravan Mineral Belt. EFR recently received its radioactive materials license from regulators and intends to construct the 500 ton per day Piñon Ridge Mill. Along with two turnkey mines that can be restarted within a year, EFR is well positioned to be a regional consolidator of uranium assets in the Colorado area. Since the Fukushima disaster, Energy Fuels has declined 64%.

We have a Buy rating on Energy Fuels and a target price of \$1.30.

IMPLIED EV/LB VALUATION

Applying the concept of mean reversion, a market-implied valuation can be derived by applying the average EV/Lb value to the valuation of each constituent company to determine its value if it reverted to the mean.

For example, for 32 company exploration category, the average EV/Lb value is \$1.46/lb of U₃O₈. U308 Corp (UWE-TSXV), which is a constituent of the uranium exploration peer group, currently trades at an EV/Lb valuation of \$0.32/lb. Applying the exploration peer average of \$1.46/lb to UWE’s company-specific metrics yields a market implied, mean-reverting valuation of \$0.98/share – a significant increase from its last trade of \$0.25/share.

We have applied the Implied EV/Lb valuation methodology to every company in our 61-company global uranium database, which we believe is the most comprehensive database in the market. The details can be seen in exhibit 11 on the next page

Exhibit 10. EV/Lb Averages by Development Stage

Stage	# of Constituents	43-101/JORC EV/Lb Avg	Global Resource EV/Lb Avg
Producer	7	\$6.80	\$8.27
Developer	4	\$3.49	\$3.23
Feasibility	7	\$0.60	\$0.56
Pre-Feasibility	11	\$1.98	\$1.83
Exploration	32	\$1.46	\$1.20
	61	\$1.97	\$1.94

DISCLAIMERS AND DISCLOSURES

Disclaimers

The opinions, estimates and projections contained in this report are those of Versant Partners Inc. ("Versant") as of the date hereof and are subject to change without notice. Versant makes every effort to ensure that the contents have been compiled or derived from sources believed to be reliable and that contain information and opinions that are accurate and complete; however, Versant makes no representation or warranty, express or implied, in respect thereof, takes no responsibility for any errors and omissions which may be contained herein and accepts no liability whatsoever for any loss arising from any use of or reliance on this report or its contents. Information may be available to Versant that is not herein.

This report is provided, for informational purposes only, to institutional investor clients of Versant Partners Inc. Canada, and does not constitute an offer or solicitation to buy or sell any securities discussed herein in any jurisdiction where such offer or solicitation would be prohibited. This report is issued and approved for distribution in Canada, Versant Partners Inc., a member of the Investment Industry Regulatory Organization of Canada ("IIROC"), the Toronto Stock Exchange, the TSX Venture Exchange and the CIPF. This report is has not been reviewed or approved by Versant Partners USA., a member of FINRA. This report is intended for distribution in the United States only to Major Institutional Investors (as such term is defined in SEC 15a-6 and Section 15 of the Securities Exchange Act of 1934, as amended) and is not intended for the use of any person or entity that is not a major institutional investor. Major Institutional Investors receiving this report should effect transactions in securities discussed in the report through Versant Partners USA.

Potential conflicts of interest

The author of this report is compensated based in part on the overall revenues of Versant, a portion of which are generated by investment banking activities. Versant may have had, or seek to have, an investment banking relationship with companies mentioned in this report. Versant and/or its officers, directors and employees may from time to time acquire, hold or sell securities mentioned herein as principal or agent. Although Versant makes every effort possible to avoid conflicts of interest, readers should assume that a conflict might exist, and therefore not rely solely on this report when evaluating whether or not to buy or sell the securities of subject companies.

Disclosures as of August 25, 2011

Versant *has* provided investment banking services or received investment banking related compensation from Kivalliq Energy and Energy Fuels within the past 12 months.

The analyst responsible for this report *has* visited the material operations of U3O8 Corp.

Analyst certification

The research analyst whose name appears on this report hereby certifies that the opinions and recommendations expressed herein accurately reflect his personal views about the securities, issuers or industries discussed herein.

Definitions of recommendations

BUY: The stock is attractively priced relative to the company's fundamentals and we expect it to appreciate significantly from the current price over the next 6 to 12 months.

BUY (Speculative): The stock is attractively priced relative to the company's fundamentals, however investment in the security carries a higher degree of risk.

NEUTRAL: The stock is fairly valued, lacks a near term catalyst, or its execution risk is such that we expect it to trade within a narrow range of the current price in the next 6 to 12 months. The longer term fundamental value of the company may be materially higher, but certain milestones/catalysts have yet to be fully realized.

SELL: The stock is overpriced relative to the company's fundamentals, and we expect it to decline from the current price over the next 6 to 12 months.

TENDER: We believe the offer price by the acquirer is fair and thus recommend investors tender their shares to the offer.

UNDER REVIEW: We are temporarily placing our recommendation under review until further information is disclosed.
